

Practice School II Report (Mid Semester), 2026

Internship Report

PREPARED BY

Sheetal Kanwar
2022BTech095

EXTERNAL SUPERVISOR

Mr. Devendra Singh (Devlok Technologies Pvt. Ltd.)

FACULTY SUPERVISOR

Prof. Richa Sharma

NAAC 'A' Grade Accredited

Department of Computer Science & Engineering
Institute Of Engineering & Technology
JK Lakshmipat University, Jaipur
Rajasthan – 302026

March, 2026

CERTIFICATE

This is to certify that **Sheetal Kanwar** has been successfully undergoing the **Practice School-II Internship** at **Devlok Technologies** beginning from **15 jan 2025**. During this internship period, the student actively participated in learning activities related to **Salesforce CRM platform and cloud-based application development**.

During the initial phase of the internship, the student focused on understanding the Salesforce ecosystem and learning how cloud-based CRM systems are used in modern organizations. This phase involved studying the architecture of Salesforce, the structure of CRM data models, and the different components used to configure and customize Salesforce applications.

The training phase also included hands-on learning activities such as creating custom objects, defining fields and relationships, implementing validation rules, and configuring page layouts. These activities helped the student develop a strong foundation in Salesforce declarative development tools.

As the internship progressed, the student also began learning about **automation features such as Salesforce Flow and approval processes**, which are widely used by organizations to automate business operations and reduce manual work. In addition, exposure to **Apex programming and Lightning Web Components** was provided in order to understand how custom business logic and interactive user interfaces are developed within the Salesforce platform.

Throughout the internship, the student demonstrated enthusiasm in learning new technologies and completing assigned tasks. The internship helped in gaining practical exposure to CRM systems and cloud application development while understanding how Salesforce solutions are implemented in real-world business environments.

This report presents the learning experience, assignments, and practical work carried out during the PS-II internship.

ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to **Devlok Technologies** for providing me the opportunity to undertake my **Practice School-II internship** and gain valuable experience in the field of **Salesforce CRM and cloud-based application development**.

This internship has been an important step in my academic journey as it allowed me to apply theoretical knowledge gained during my studies to practical scenarios in a professional setting. The experience helped me understand how modern organizations use Salesforce to manage customer information, automate business processes, and improve operational efficiency.

I would like to thank my **external supervisor and mentors** for their continuous support and guidance throughout the internship period. Their valuable suggestions and encouragement helped me understand different concepts of Salesforce development and customization.

I would also like to thank the **technical team members** who shared their knowledge and provided assistance whenever required. Their support helped me understand the workflow followed in professional development environments and the importance of collaboration in technology projects. I would also like to express my sincere appreciation to my **faculty supervisor and internship coordinators** at the university for their guidance and encouragement throughout the internship program.

Finally, I would like to thank everyone who directly or indirectly supported me during this internship. The experience gained during this period has helped me strengthen my technical knowledge and improve my understanding of Salesforce cloud technologies.

ABSTRACT

The main objective of this internship was to gain practical exposure to **Salesforce CRM platform development and cloud-based enterprise applications**. Salesforce is one of the most widely used customer relationship management platforms in the world and is used by organizations to manage customer interactions, automate business processes, and analyze operational data.

The internship provided an opportunity to understand how the Salesforce platform is used in real-world business environments and how organizations configure the system to meet their operational requirements. During the internship period, emphasis was placed on understanding the structure of Salesforce applications and learning how different platform components work together.

The internship began with a learning phase where the primary focus was on understanding CRM concepts and exploring the Salesforce platform environment. This phase included studying Salesforce architecture, navigating the user interface, and understanding how data is organized using objects, fields, and relationships.

After gaining familiarity with the platform, practical exercises were performed to understand how Salesforce applications are customized according to business requirements. These exercises included creating custom objects, defining fields and page layouts, and implementing validation rules to ensure data accuracy.

Another important part of the internship was learning about Salesforce automation tools such as **Flow and Process Builder**, which allow organizations to automate repetitive tasks and streamline business operations. These tools help in reducing manual effort and improving the efficiency of business processes.

In addition to declarative tools, basic exposure to **Apex programming and Lightning Web Components (LWC)** was also provided. These technologies allow developers to build advanced customizations and interactive user interfaces within the Salesforce platform.

Through this internship, practical knowledge was gained about Salesforce customization, automation, and cloud application development. The experience helped improve both technical understanding and professional awareness of how CRM systems are implemented in organizations.

ABOUT THE ORGANIZATION

Devlok Technologies is a technology-driven organization that focuses on delivering software solutions and digital transformation services to businesses. The company provides innovative technology solutions that help organizations improve operational efficiency and streamline their business processes.

The organization works with modern software technologies and cloud platforms to develop enterprise applications and digital solutions for businesses across different industries. One of the key platforms used by many organizations today is **Salesforce CRM**, which enables companies to manage customer relationships and automate business operations.

The company aims to help organizations adopt modern digital technologies and improve their productivity through the use of cloud-based systems and advanced software solutions.

Mission

To provide innovative technology solutions that enable organizations to improve efficiency and adapt to the rapidly evolving digital environment.

Vision

To become a leading provider of enterprise technology solutions and cloud-based software platforms.

Services Offered

The company provides several technology services including:

- Enterprise Software Development
- Cloud Application Development
- CRM Solutions using Salesforce
- Digital Transformation Services
- Business Process Automation

These services help organizations modernize their systems and improve their business performance.

INTRODUCTION

2.1 Internship Overview

The internship program provided an opportunity to gain practical exposure to **Salesforce CRM platform and cloud-based application development**. The primary objective of the internship was to understand how Salesforce applications are configured, customized, and used to support business processes.

The internship began with an initial learning phase during which the fundamentals of Salesforce were studied. This included understanding CRM concepts, Salesforce architecture, and the basic components of the Salesforce platform such as objects, fields, page layouts, and record management.

During this phase, several practical exercises were completed to understand how Salesforce applications are configured and how business requirements are implemented using declarative tools.

After gaining basic knowledge of the platform, the internship work gradually progressed toward learning automation tools such as **Salesforce Flow**, which allow businesses to automate tasks and improve operational efficiency.

The internship also included exposure to basic **Apex programming** concepts and **Lightning Web Components**, which are used for implementing custom logic and building interactive user interfaces in Salesforce applications.

Through these activities, the internship provided valuable experience in Salesforce customization and cloud application development.

2.2 Learning Objectives

During the internship, the focus was on developing both conceptual understanding and practical knowledge of Salesforce technologies. The internship also aimed to bridge the gap between theoretical learning in the classroom and real-world technology implementation in professional environments

.

The major learning objectives of the internship were:

- To understand the fundamentals of **Customer Relationship Management (CRM)** systems and their importance in modern business operations.
- To learn the **Salesforce platform architecture** and understand how different components of the platform work together to manage and organize business data.
- To gain hands-on experience in **Salesforce customization**, including creating custom objects, defining fields, and configuring page layouts.

- To understand the concept of **data modeling in Salesforce**, including relationships between objects and efficient data organization.
- To learn how to implement **validation rules** and maintain data accuracy within the Salesforce platform.
- To gain practical exposure to **automation tools such as Salesforce Flow**, which help automate repetitive business processes.
- To understand the basics of **Apex programming language** and how it is used to implement custom business logic when required.
- To learn the fundamentals of **Lightning Web Components (LWC)** and understand how modern user interfaces are built in Salesforce applications.
- To understand the workflow of **Salesforce development and administration** in professional environments.
- To improve problem-solving and analytical skills by working on small Salesforce-based projects and practical exercises.

These learning objectives helped in building a strong foundation in Salesforce CRM platform development and provided valuable experience in working with cloud-based enterprise applications. The internship experience also helped in developing a better understanding of how technology solutions are designed and implemented to support business operations.

2.3 Importance of Industry Training

Industry training is an important part of technical education because it helps students gain practical experience and understand how technologies are used in real-world environments. The importance of industry training includes:

- Helps bridge the gap between **theoretical knowledge and practical implementation**.
- Provides exposure to **real industry technologies and tools**, such as Salesforce CRM.
- Helps students understand **how software systems are developed and used in organizations**.
- Improves **technical skills such as data management, system customization, and automation**.
- Develops **problem-solving and analytical thinking abilities** through practical assignments.
- Provides experience of **professional work environments and teamwork**.
- Helps students understand **industry workflows, project structure, and development practices**.
- Improves **communication, responsibility, and time management skills**.
- Prepares students for **future careers in technology and software development**.

Overall, industry training helps students gain practical knowledge, improve technical skills, and prepare for real-world professional opportunities.

TOOLS & TECH STACK USED

During the internship, several tools and technologies were used while learning and working on Salesforce applications.

Salesforce Platform

A cloud-based customer relationship management platform used to build enterprise applications.

Apex Programming Language

A programming language used to implement custom business logic within Salesforce.

Lightning Web Components (LWC)

A framework used for building modern and interactive user interfaces on the Salesforce platform.

SOQL (Salesforce Object Query Language)

A query language used to retrieve data from Salesforce objects.

Salesforce Flow

A declarative automation tool used to automate workflows and business processes.

Salesforce Developer Console

A development tool used for writing and testing Apex code.

Visual Studio Code

A development environment used for Salesforce development and code management.

ROLES AND RESPONSIBILITIES

4.1 OBJECTIVES

The main objective of the internship was to gain practical experience in a professional software development environment and understand how real-world applications are developed and maintained within an organization.

The internship focused on learning modern web development technologies and applying them in practical assignments and internal projects. The training period helped in understanding the company's development workflow, project structure, and coding practices used in real applications.

Another objective was to gain exposure to real development tasks by working on internal company modules. This helped in understanding how frontend interfaces are developed, how UI issues are identified and fixed, and how developers collaborate within a team environment.

4.2 ROLES AND RESPONSIBILITIES

During the internship, several learning activities and responsibilities were performed in order to gain practical experience with the Salesforce platform.

The responsibilities included:

- Learning Salesforce platform architecture and CRM fundamentals
- Creating custom objects and defining fields within Salesforce
- Configuring page layouts and record structures
- Implementing validation rules to maintain data accuracy
- Automating processes using Salesforce Flow
- Learning basic Apex programming concepts
- Understanding the development workflow used in Salesforce projects

These activities helped in gaining practical exposure to Salesforce customization and application development.

WORK DONE

5.1 INTERNSHIP WORK DONE SO FAR

The internship work consisted of both theoretical learning and practical exercises related to the Salesforce platform.

During the initial phase of the internship, emphasis was placed on understanding Salesforce fundamentals and exploring the platform environment. This included learning how data is stored using objects and fields and how applications are customized using declarative tools.

After gaining familiarity with the platform, several practical assignments were completed to understand how Salesforce applications are developed.

Project 1 – Lead Management System

A simple lead management system was designed using Salesforce objects. Custom fields were created to store lead information, and validation rules were implemented to ensure proper data entry.

Project 2 – Student Registration System

A custom object was created to manage student records and store information such as name, course, and contact details. Relationships between objects were implemented to organize data effectively.

Project 3 – Task Reminder Automation

Automation was implemented using Salesforce Flow to send reminders for pending tasks and activities. This helped in understanding workflow automation within Salesforce.

These projects helped in gaining practical experience with Salesforce customization and automation features.

5.2 WEEK-WISE LOG

Logbook

Week	Task Assigned	Technology / Tools	Work Done	Status
Week 1	Introduction to CRM and Salesforce Platform	Salesforce	Studied CRM fundamentals, explored Salesforce interface, and understood navigation of the platform	Completed
Week 2	Salesforce Data Model	Salesforce Objects & Fields	Created custom objects and fields, learned about records and object relationships	Completed
Week 3	Salesforce Customization	Page Layouts, Record Types	Configured page layouts and customized object structure for better data management	Completed
Week 4	Data Validation Implementation	Validation Rules	Implemented validation rules to ensure correct data entry and maintain data accuracy	Completed
Week 5	Salesforce Automation Basics	Salesforce Flow	Created basic automation flow to update records automatically based on conditions	Completed
Week 6	Workflow Automation	Salesforce Flow	Designed process automation flows to guide users and update records automatically	Completed
Week 7	Apex Programming Introduction	Apex, Developer Console	Learned basic Apex syntax, classes, and trigger concepts for implementing custom logic	In progress
Week 8	Lightning Web Components	LWC, VS Code	Studied fundamentals of Lightning Web Components and understood UI component structure	pending
Week 9	Project 1 – Lead Management System	Salesforce Objects, Validation Rules, Flow	Created a lead management system with custom fields, validation rules, and automation	pending
Week 10	Project 2 – Student Registration System	Custom Objects, Page Layouts	Developed a student registration management system using custom objects and fields	prnding
Week 11	Project 3 – Task Reminder Automation	Salesforce Flow	Implemented automation flow for task reminders and workflow management	Pending

FUTURE PLAN

During the remaining period of the internship, the focus will be on expanding knowledge of Salesforce development and learning more advanced platform features.

The future learning plan includes:

- Learning advanced Apex programming
- Developing Lightning Web Components
- Understanding Salesforce integration with external systems
- Learning API-based communication between systems
- Understanding Salesforce deployment processes

These activities will help in gaining deeper knowledge of Salesforce development and cloud application architecture.

CONCLUSION

The internship provided valuable exposure to the **Salesforce CRM platform and cloud-based application development environment**. It helped in understanding how organizations use Salesforce to manage customer data, automate business processes, and improve operational efficiency.

During the internship, knowledge was gained about Salesforce customization tools, automation features, and basic development concepts. Practical assignments and projects helped strengthen the understanding of how Salesforce applications are built and managed.

Overall, the internship served as an important learning experience and helped build a strong foundation in Salesforce technologies and cloud-based software development
